GPU MONITORING WITH AMD SMI

- System Management Interface (SMI) is a standard capability for future CG/VDI GPUs
 - API-based interface for simple integration with existing monitoring tools
- Provides consistent mechanism to access GPU information
 - Available from both host and guest (limited functionality from guest)
- Provides both static and dynamic data
 - Static data – Board, VBIOS, firmware info, etc.
 - Dynamic data – GPU and memory utilization, ECC error counts, etc

END USER EXPERIENCE TESTING - THE EUC SCORE PLAYER INTERFACE

- 1 Cloud and instance type (e.g. Azure NC8asT4_V3)
- 2 Latency and network bandwidth
- 3 Click for detailed information about the VM specs, connection and endpoint
- 4 Click to maximise the viewport
- 5 Viewport playback (examine for compression / responsiveness to mouse movements, etc)
- 6 Task Manager showing resources used at the endpoint (not the cloud workstation)
- 7 Timeline (play back in real time or scrub up and down, as necessary)

- a Actual CPU utilisation
- b Quantisation Priority (QP) (level of compression being applied to the video stream)
- c Performance in the viewport (Frames Per Second)
- d Round trip network latency
- e Actual network bandwidth used
- f Actual GPU utilisation of Nvidia GPUs with select applications
- g GPU memory utilisation
- h GPU utilisation for encoding the video stream (H.264)

FINDINGS

- Azure NGads_V620 (AMD V620 GPU) has great CPU and GPU; Performance is great.
- Entry level NG8ads_V620 with 1/4 of GPU is great for AEC Design Apps.
- The NG16ads_V620 with 1/2 of GPU is great for AEC Design and Visualization
- Azure NGads_V620 1/4 and 1/2 GPU – understand limitations with regards to MultiMonitor and FHD/4K resolution, encoding/decoding.
- Azure Ngads_V620 with full GPU is providing great performance at FHD and 4K
- RealTime RayTracing (RT), check application updates, check AMD driver – often doesn't work.

FINDINGS

- Overall the NGads_V620 with AMD Genoa CPU at 2.45 GHz and AMD Radeon V620 GPU provides slightly better performance than the Azure NCasT4_v3 with AMD 7V12 Rome CPU at 2.45 GHz and a dedicated NVIDIA T4 GPU.
- Overall the NGads_V620 with AMD Genoa CPU at 2.45 GHz and AMD Radeon V620 GPU provides slightly better performance than the Azure NVadsA10_v5 machines with AMD 74F3 Milan CPU with an NVIDIA A10 GPU.
- NG32adms_V620_v1 has 176GB of RAM (32 vCPU and dedicated V620) – don't see much usage for EUC here
- Azure NGads_V620 (AMD V620 GPU) price isn't as great / low as expected (since no GPU licensing). Power consumption ... ?!
- Availability of Ngads_V620 is attention! (quota and regions)
