An aerial photograph showing a multi-lane highway on the left and an offshore wind farm on the right. The wind turbines are arranged in a long, straight line extending into the distance. The sky is blue with some clouds, and the water is a deep blue. A large, semi-transparent dark grey circle is overlaid on the left side of the image, containing the Citrix logo and the main title.

citrix®

How to get the best User Experience for 3D Workloads

Rody Kossen

Video Codecs

Video Codecs

Video codecs are very common

- Remoting protocols
- And many, many more!

They are optimized to reduce bandwidth of moving images

Codecs & introduction date:

- H.264 (AVC) – 2003
- H.265 (HEVC) – 2013
- AV1 - 2018

Video Codecs

- Most common codec in the world
- Many devices support hardware decoding & Software decoding possible

But...

In 2003, high-res screen were not standard or even available. HDR? 10-bit?

- Commonly used for Blu-rays
- Broad support for HW Enc / Dec
- CPU decoding is costly

	Encoding	Decoding
NVIDIA	Maxwell (2014)	Pascal (2016)
Intel	6 th gen (2016)	6 th gen (2016)
AMD	Raven (2017)	GCN 3 (2015)

AV 

AV1 support

AV1 is one of the latest codecs

- Superior compression
- Supported with “Selective” & “Entire Screen”
- Needs Hardware Encoder & Decoder

Requires VDA & CWA for Windows 2305+

Requires VDA 2308 for encoding on Intel GPUs

	Encoding	Decoding
NVIDIA	Lovelace (2022)	Ampere (2020)
Intel	Arc (2022)	11 th gen (2021)
AMD		RDNA2 (2020)

AV1 support

Bandwidth utilization compared to H.264:

Quality	H.265	AV1
Low Quality	-46.5%	-56,6%
Medium Quality	-17.6%	-44.1%
High Quality	-3.1%	-36%

H.264
MPEG-4/AVC

The image shows two side-by-side screenshots of a Remote Display Analyzer window. Both windows display a 3D rendering of a red classic car (a 1963 Chevrolet) in a virtual environment. The left window shows performance metrics for H.264, and the right window shows metrics for AV1. The AV1 window shows significantly better performance, particularly in terms of bandwidth and CPU usage.

Let's talk policies!

Want to get the best User Experience in most scenarios?

Graphics Policy – Deep Dive

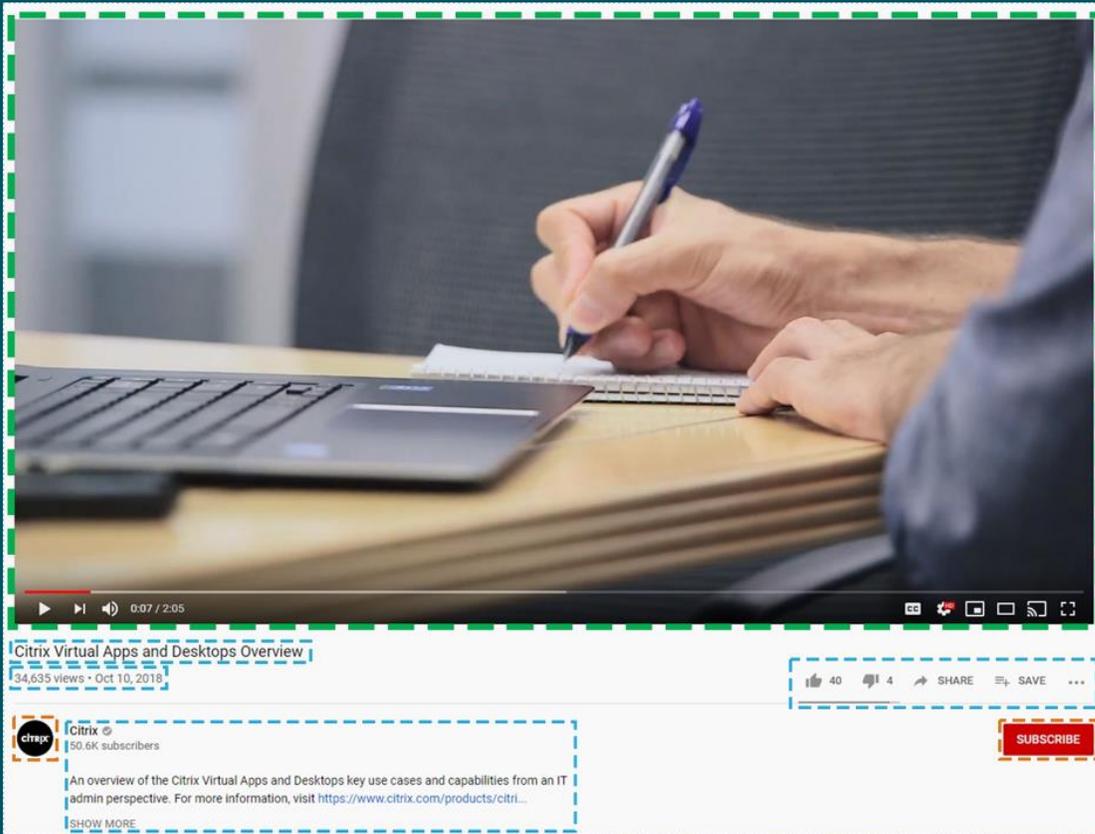

Starting point:

Use video codec for Compression:

- Use when Preferred (Default)
- For Actively Changing Regions
- Do not use video codec
- For the entire screen

Graphics Policy – Use video codec for Compression

- Text, Simple Images and Solid Colors
- Static Image Content
- Moving (Transient or Fluid) Images

Graphics Policy – Use video codec for Compression

For Actively Changing Regions

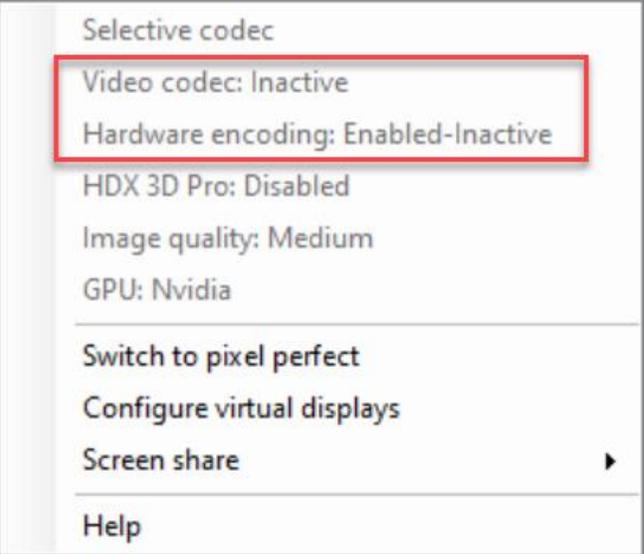

- Text: **RLE**
- Simple Images & Solid Colors: **RLE**
- Static Images: **JPEG**
- Moving Images: **H.264 / H.265 / AV1 (4:2:0)**

Do not use video codec

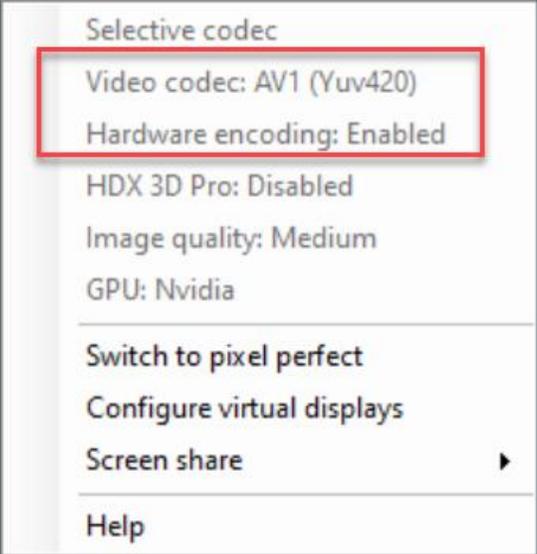

- Text: **RLE**
- Simple Images & Solid Colors: **RLE**
- Static Images: **JPEG**
- Moving Images: **Adaptive JPEG**

Also referred to as: **Selective**

Graphics Policy – Use video codec for Compression

No fluid graphics detected
Codec Inactive

Fluid graphics detected,
AV1 for selected region

Graphics Policy – Use video codec for Compression

For the Entire Screen (a.k.a. HDX 3D Pro)

- Text: **Video Codec (4:2:0)**
- Simple Images & Solid Colors: **Video Codec (4:2:0)**
- Static Images: **Video Codec (4:2:0)**
- Moving Images: **Video Codec (4:2:0)**

Video Codec = H.264 / H.265 / AV1

Graphics Policy – Use when Preferred

Use when Preferred

- **Citrix Default**
- Will be the same as “**For Actively Changing Regions**”
- **Except**, when “Optimize for 3D Graphics” is enabled -> “For the Entire Screen”

Graphics Policy – Visual Quality

Visual Quality

- High
- Medium
- Low

Affects JPEG Quality level of static images and Moving Images in Selective mode.

Does not have effect in “For the Entire Screen”

Two additional options:

- Always Lossless
- Build-to-Lossless

Graphics Policy – Visual Quality – Always Lossless

Pixel Perfect image quality

“For Actively Changing Regions” & “Do not use video codec”

- Uses RLE instead of JPEG / Video codec

“For the Entire Screen”

- Need “Allow Visually Lossless” set to “Enabled”
- Uses YUV 4:4:4 instead of YUV 4:2:0
- Supports H.264 4:4:4 and H.265 4:4:4 (8-bit & 10-bit HDR)*

Graphics Policy – Visual Quality – Always Lossless

Always Lossless uses a **significant** amount of bandwidth

- Impact on interactivity when bandwidth is insufficient
- Use “Allow visually Lossless” for higher FPS, but requires GPU on VDA
- For YUV 4:4:4, H.265 is recommended but requires certain hardware

	Encoding	Decoding
NVIDIA	Pascal (2016)	Turing (2018)
Intel	10 th gen (2019)	10 th gen (2019)
AMD	Not supported	Not supported

H.265 YUV 4:4:4 - 4K Performance

H.264
Software encoding

H.265
Hardware Encoding

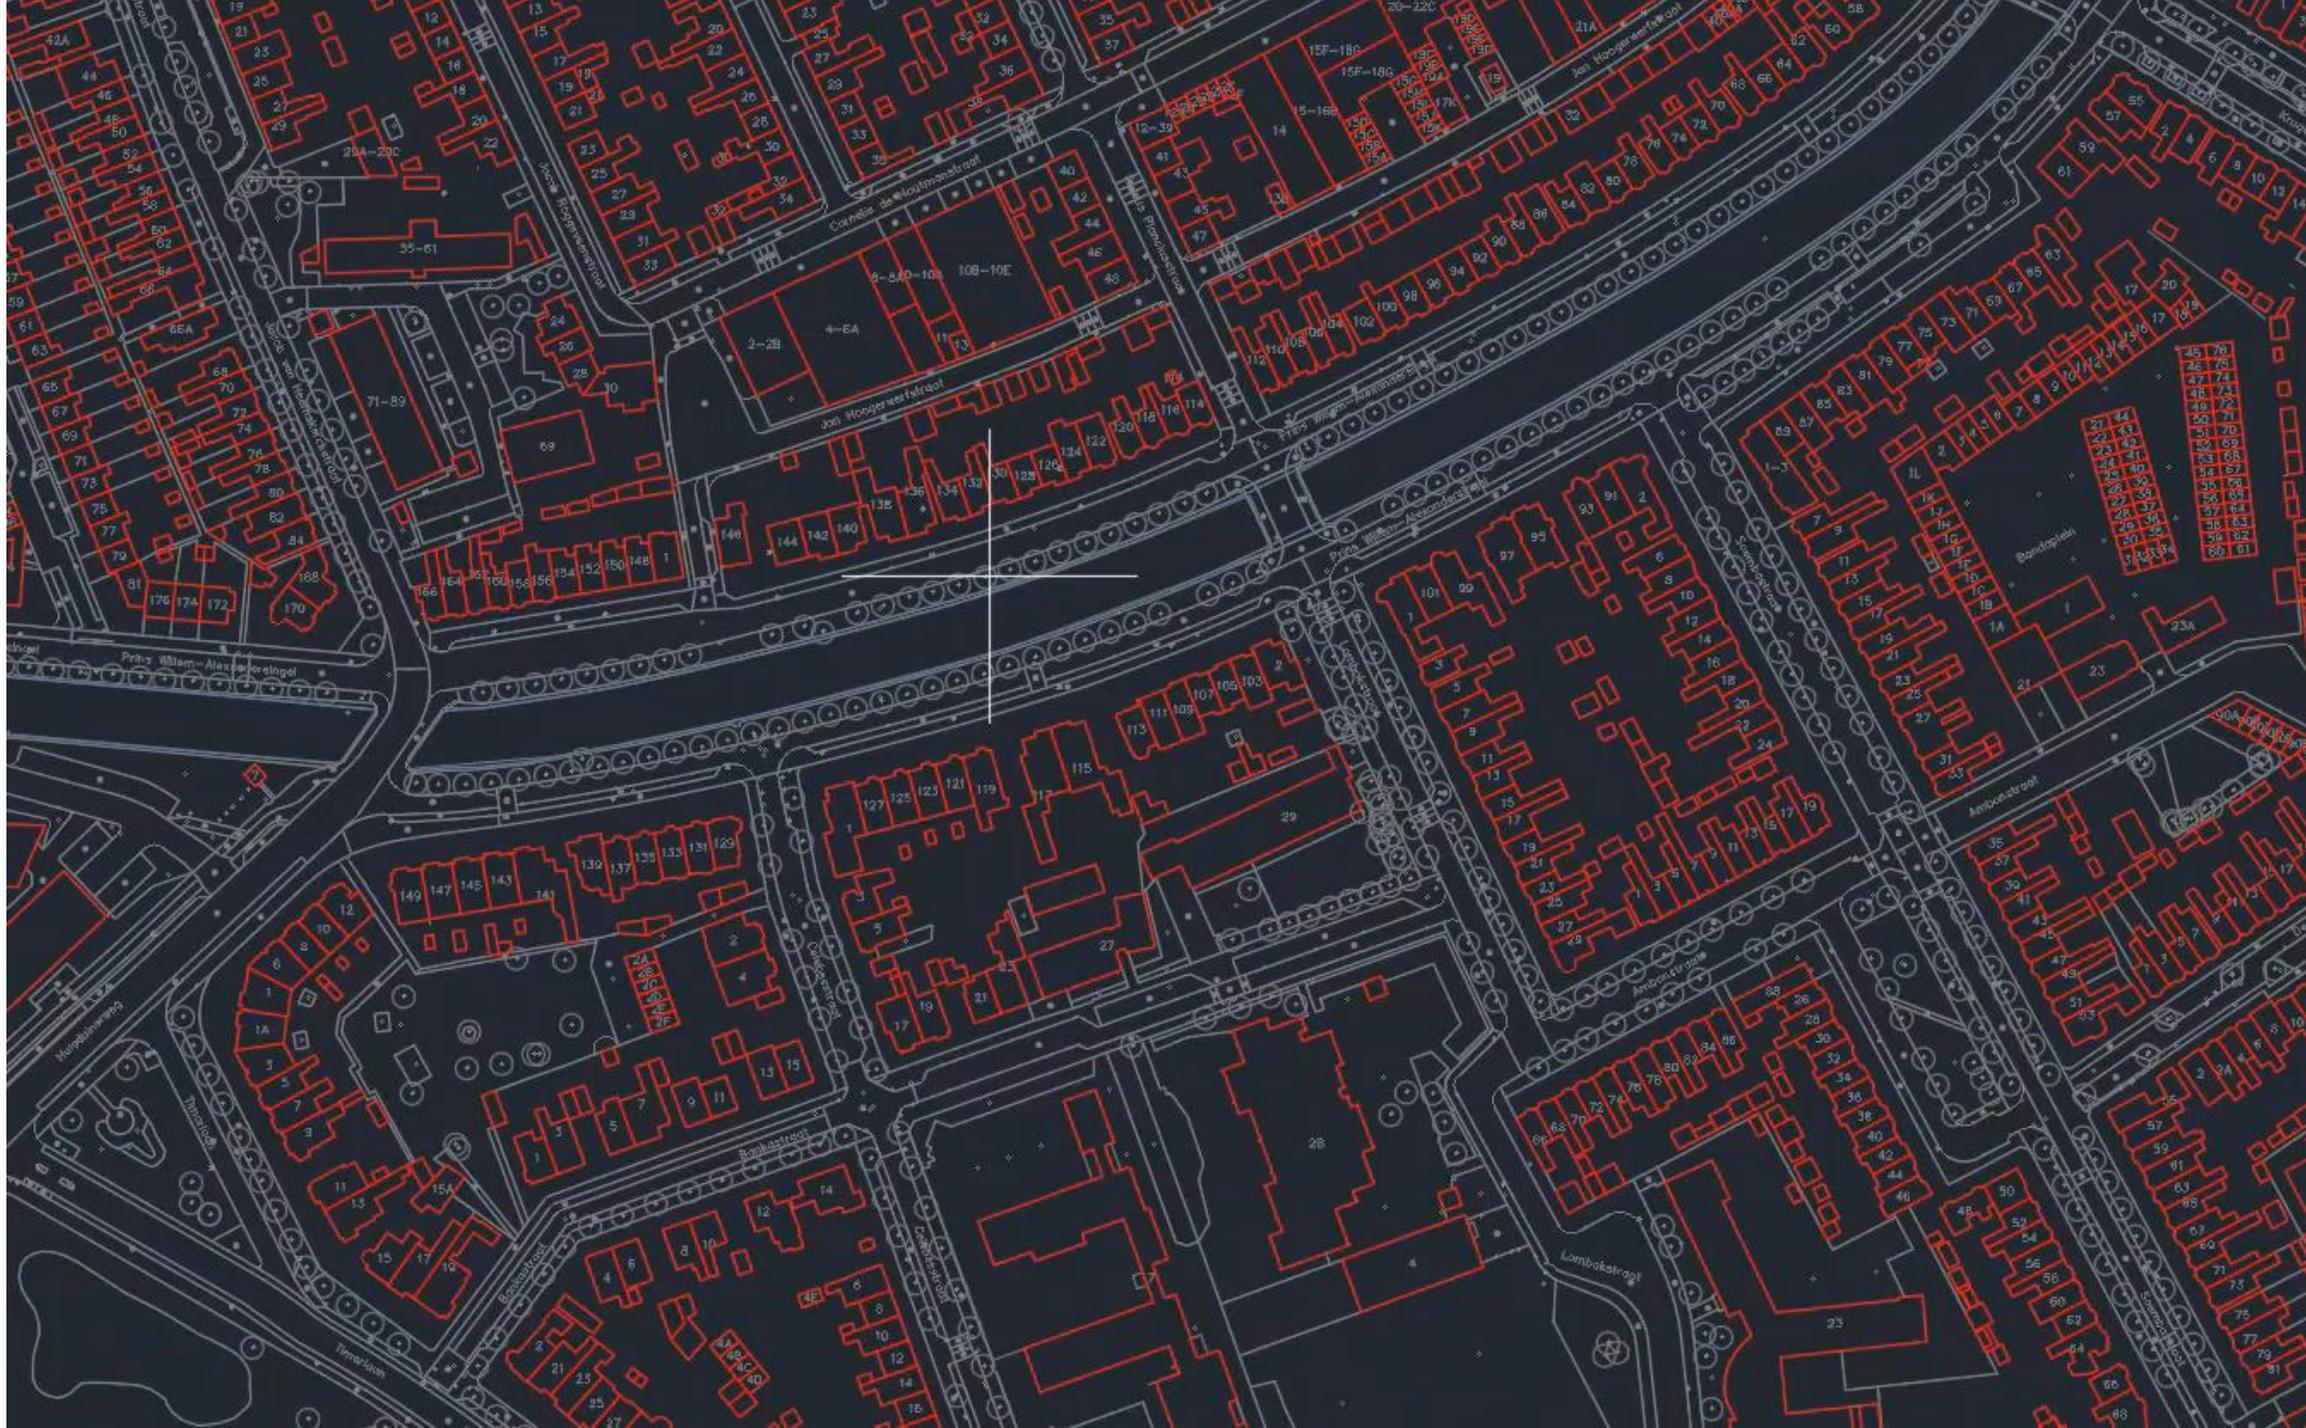

Graphics Policy – Visual Quality – Build-To-Lossless

Build-To-Lossless is a unique mode

- Balance between “Pixel Perfect” and “Bandwidth consumption”
- Combines Fullscreen video codec with Lossless sharpening (RLE)

If “Allow visually lossless” is enabled:

- Build-to-Visually Lossless
- H.264 / H.265 4:4:4 (8-bit or 10-bit + HDR)
- Lower Quality for Moving Images, builds up to “Visually Lossless”

Graphics Policy – Visual Quality – Build-To-Lossless

Build-To-Lossless

- Better interactivity than “Always Lossless”
- Recommended mode if you choose “Allow Visually Lossless”

Graphics Policy – Target Frame Rate

Target Frame Rate

- Default: 30 FPS
- Range: 1-60 FPS -> Can be increased to **120 FPS** via Registry

Be aware:

- High FPS requires high performing hardware (VDA / Client)
- Impacts scalability / User Experience
- NVIDIA vGPU FPS Limits

Graphics Policy – Additional options

Display Memory Limit

- Only needed for Non-GPU
- Memory depth in bytes =
(color-depth-in-bits-per-pixel) / 8) x
(vertical-resolution-in-pixels) x
(horizontal-resolution-in-pixels)
- Deprecated in CVAD 2311

Use cases

Too many options... Let's get into some Use Cases!

Office Workers / Developers

Policy	Value
Use Video Codec for Compression	Use when preferred
Hardware Encoding	Enabled
Visual Quality	Medium / High
Target Frame Rate	30

Financial Traders

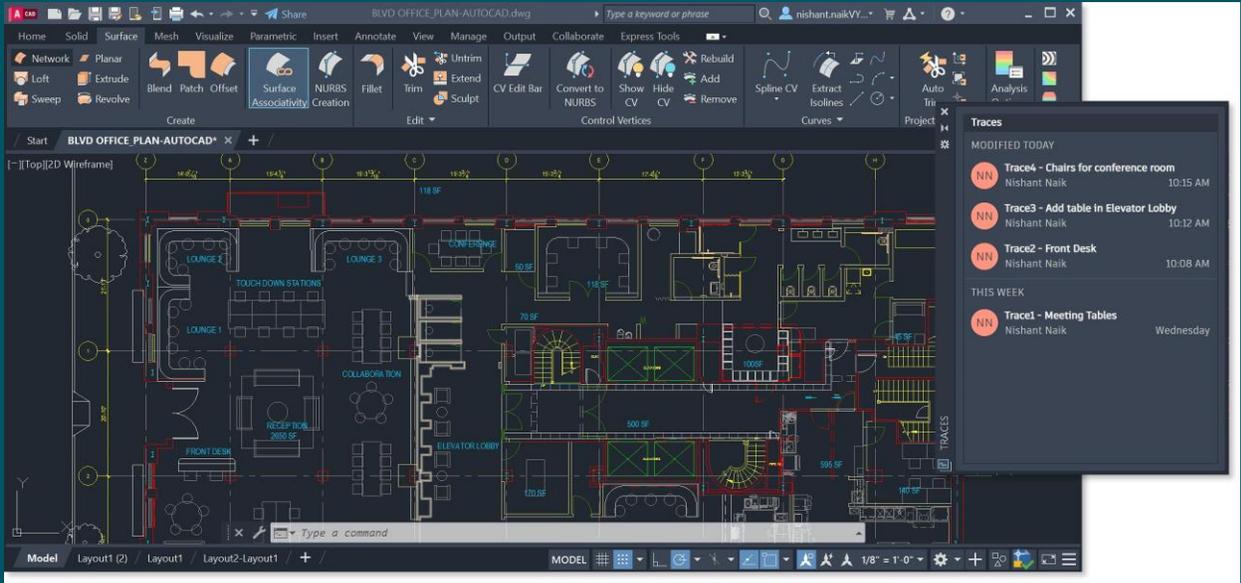

Policy	Value
Use Video Codec for Compression	Use when preferred
Hardware Encoding	Enabled
Visual Quality	Medium / High
Target Frame Rate	30

<https://www.citrix.com/blogs/2022/09/22/how-to-give-financial-traders-the-citrix-hdx-performance-they-need/>

2D CAD Workload

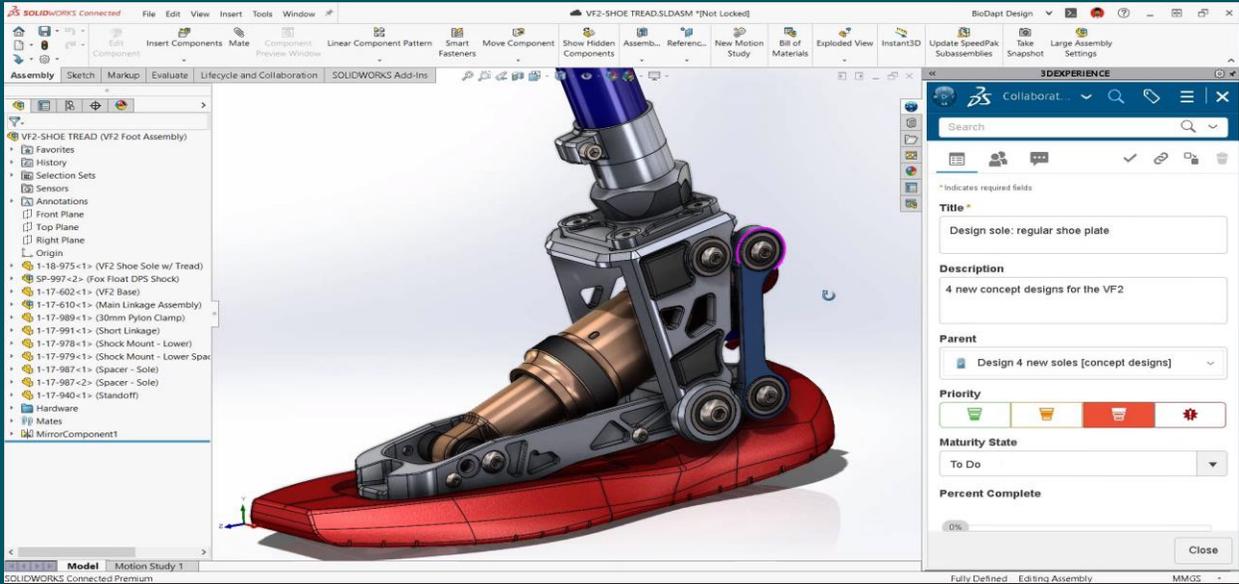

Policy	Value
Use Video Codec for Compression	Use when preferred
Hardware Encoding	Enabled
Visual Quality*	High / Build-To-Lossless
Target Frame Rate	30
Allow Visually Lossless*	Disabled / Enabled

*Setting depend on customer / end-user requirements

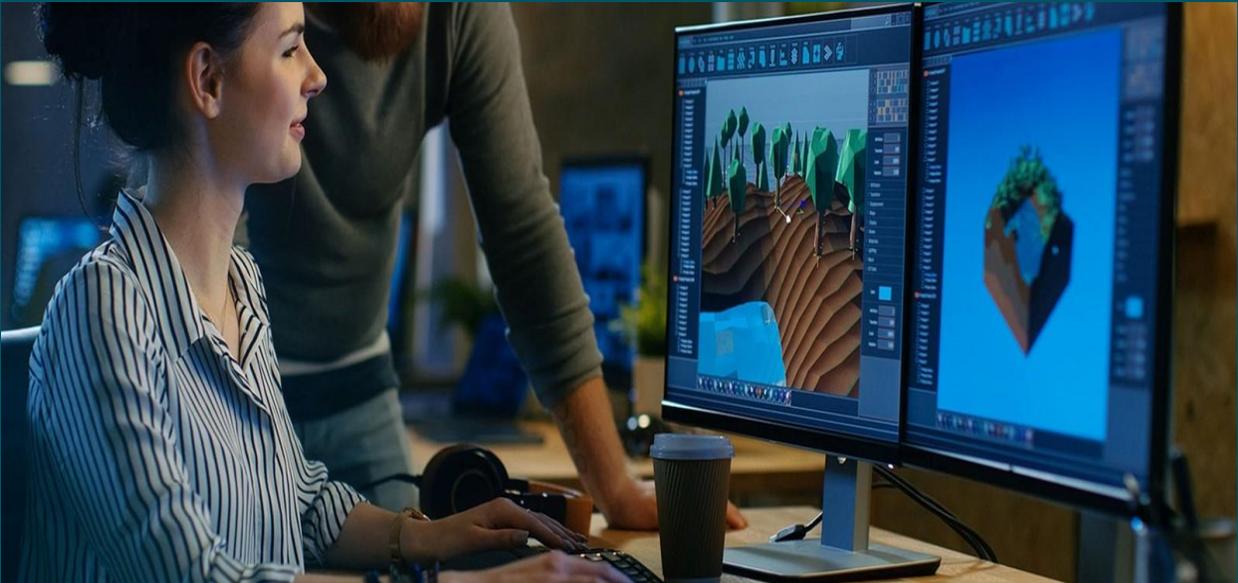

3D CAD Workload

Policy	Value
Use Video Codec for Compression	Use when preferred
Hardware Encoding	Enabled
Visual Quality	Build-To-Lossless
Target Frame Rate	30 (45 or 60 optional)

Game Developers / Video editors

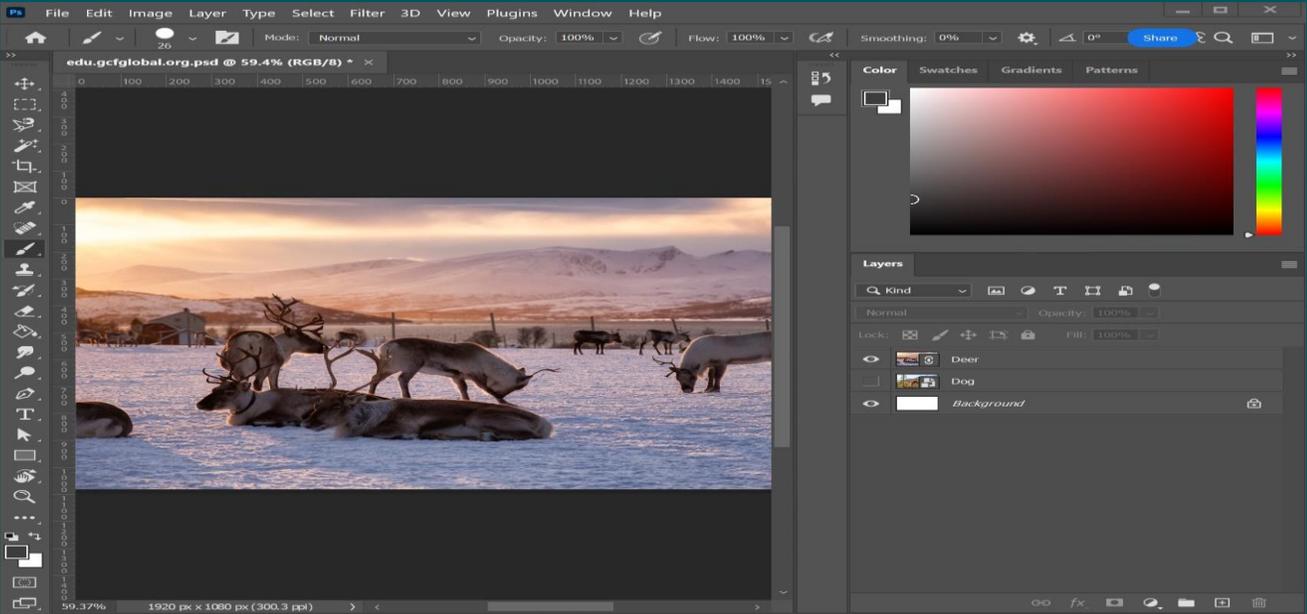

Policy	Value
Use Video Codec for Compression	Use when preferred
Optimize for 3D Graphics	Enabled
Hardware Encoding	Enabled
Visual Quality	High*
Target Frame Rate	60 (120 optional)

*For best quality AV1 preferred, otherwise H.265

Content Creators

Policy	Value
Use Video Codec for Compression	Use when preferred
Optimize for 3D Graphics	Enabled
Hardware Encoding	Enabled
Visual Quality	Build-To-Lossless / Always Lossless
Allow Visually Lossless	Enabled
Target Frame Rate	30 (60 Optional)
Color Depth	8 or 10 bit / 10bit HDR

HDX Innovations

Loss tolerant mode for Graphics

EDT Lossy

- Ensures the session remains interactive when packet loss is detected
- Once network conditions degrade beyond pre-defined bandwidth, latency and packet loss thresholds, loss tolerant mode kicks in
- The thresholds can be configured via policy, with the defaults being 300ms latency and 5% packet loss.
- CWA 2311 for Windows is currently supported.
- EDT must be enabled + EDT Lossy must also be enabled on GGS.

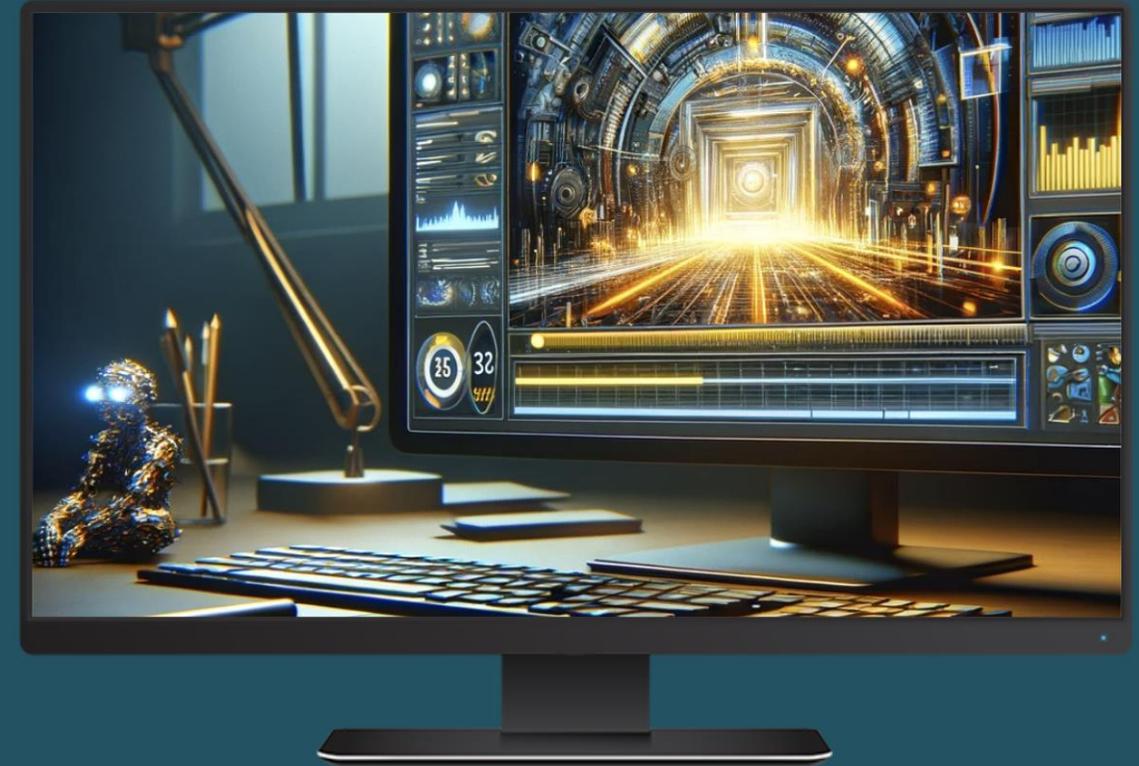

Next-Gen User-Experience

Loss Tolerant Mode

Enhanced Video Codec Selection

Citrix Workspace App for Windows 2311.1

- Experience seamless video streaming as Citrix Workspace App now automatically detects the best video codec to use, ensuring superior performance
- Automatic endpoint's decoding capabilities during installation
- Customize your experience with 'Visual Quality' settings, while still benefiting from automatic codec selection
- Whether it's AV1, H.265, or H.264, our app ensures compatibility with both VDA and client, guaranteeing a seamless experience

Upgrade your Citrix Workspace experience today and enjoy enhanced video codec selection for optimal performance and quality!

Lessons learned

- Default policies are a good starting point
- Test your workloads and include your end-users
- GPUs accelerate the encoding process
- Latest GPU generations have the best encoding options
